EDUCATION

University of California, Irvine — Irvine, CA

B.S. in Software Engineering | Expected June 2028

GPA: 3.59/4.00

Relevant Coursework: Data Structures and Algorithms, Programming in C++, Programming in Java, Software Design, Python Programming, Discrete Mathematics, Linear Algebra, and Statistics

TECHNICAL SKILLS

Languages: Python, C++, C, Java

Frameworks/Libraries: FastAPI

Tools: Git, GitHub, Arduino, VS Code, Eclipse, Figma

Technical Concepts: Data Structures & Algorithms, OOP, REST APIs, Testing & Debugging

EXPERIENCE

University of California, Irvine

January 2026 - Jun 2026

Learning Assistant, ICS 31: Introduction to Programming

- Guided around 25 students each week through Python programming exercises, debugging, and problem-solving during weekly laboratory sessions.
- Supported students in developing programming fundamentals and independent problem-solving strategies through individualized guidance.

TECHNICAL PROJECTS

Graph Algorithms Library | C++ | ICS 46: Data Structure Implementation and Analysis

April 2026

- Implemented graph representations and traversal algorithms, including depth-first search, breadth-first search, Dijkstra's shortest-path algorithm, and Kruskal's minimum spanning tree algorithm.
- Built a disjoint-set structure using path compression to efficiently connect graph components.
- Tested algorithms on multiple graph inputs and debugged traversal, pathfinding, and weight-calculation behavior.

Design At UCI, CA, Irvine

April 2026 - Jun 2026

UI/UX Designer, Nudge Public-Speaking Application

- Collaborated with a team to design the user interface for Nudge, an application that helps users improve their public-speaking skills.
- Conducted competitive analysis and user research and developed personas to guide design decisions during an eight-week case study.
- Created and refined the application's interface and key user flows through an interactive Figma prototype.

Infant Safety Proximity Alert System | Arduino

May 2024

- Collaborated with a team to develop an Arduino-based safety prototype intended to detect when a child approaches hazardous areas, including doors and staircases.
- Assembled and connected an Arduino, proximity sensor, and indicator light to create a functional hardware prototype.
- Programmed the Arduino to process sensor readings and activate the indicator light when an object entered a defined proximity range.

LEADERSHIP & ACTIVITIES

Saudi Students Association club, CA, Irvine

October 2025 - Jun 2026

Internal Vice President

- Assisted the President in planning and executing meetings, events, and club initiatives
- Helped maintain positive communication with external organizations, faculty advisors, or sponsors
- Oversaw logistics (room reservations, event schedules, etc.)

Mohammed Bin Salman Foundation - Distinct Program, SA, Riyadh

Jun 2023 - July 2024

Distinct Program Ambassador

- Advocated for the MISK Distinct College Prep Program through means of social media and in-person seminars
- Helped 100+ students through the application process

AWARDS / HACKATHONS

Global Students Research Conference, SA, Dhahran

4 February 2025 - 6 February 2025

Hackathon Finalist

- Worked under the supervision of alumni professors, professionals, and entrepreneurs in the fields of electrical engineering, mechanical engineering, and business.
- Collaborated with teammates to design and present a hackathon on sustainable solutions for power conservation to judges.
- Designed an innovative water desalination system leveraging waste heat from data center cooling systems to enhance energy efficiency and sustainability

CareTech at UCI, CA, Irvine

March 2026

Competitor

- Collaborated with a team to develop **RetinaScan**, an AI-assisted web application for retinal disease screening and diagnosis
- Integrated AI tools and web technologies to create a user-friendly platform for analyzing retinal scan data
- Designed and presented the project solution under a fast-paced hackathon environment
